Trauma-Informed Resilient Schools Adults

This training teaches school professionals, and other adults who care for children, how to create trauma-informed schools, classrooms and other settings.

The training focuses on resilience, exploring the core values and beliefs of educators and other adults and places an emphasis on understanding how trauma impacts children and their school and life experience. Lastly, proactive strategies such as fostering connections, prioritizing social and emotional skills, establishing safety, and promoting play are presented. This course provides detailed information and concrete actions that answer not just the “why” but also the “how” to create the best life for traumatized children and all the adults who interact with them.

Learning Objectives:

- Identify the four main protective factors of resilient youth.
- Discuss the four universal needs and provide examples to support each.
- Name three differences between grief and trauma reactions.
- Identify the three main functions of the deep brain.
- Identify at least three functions of the outer brain.
- Describe how trauma impacts the deep and outer brain functions specifically in the school setting.
- Identify at least five ways trauma and attention deficit hyperactivity disorder symptoms may overlap.
- Identify at least five proactive strategies.
- Name at least three of the top fears of school-age children.
